This article deals with data appertaining to the geology,  
petrography and mineralogy of one of the Buriat forma-  
tion of apatite synchronous with the Precambrian rock  
formation of the Khamar-Daban ridge. The genesis of  
the formation is discussed. The work on the formation  
was carried out in 1954-55. (Author)

Emulsion polymers possess selective adsorption properties and adsorb only basic dyes from aqueous solution. By the aid of synthetic resins it is possible to separate some dyes from others. The dyeing of finely dispersed polymers by aqueous solutions of dyes may be regarded as a process of chemical interaction between the dye base and the acidic polymer. (Author)
